GPS Tracking

User Guide & Feature Overview

Live vehicle tracking, trip reports, driving behaviour, geofence alerts and loud alarms — on the web, Android and iPhone. Everything you need to know to start using it.

For vehicle owners and fleet customers

Edition: October 2026

OVERVIEW

What you get

A GT06 GPS tracker fitted in your vehicle sends its position every few seconds. The app turns that into a live map, a full history and clear daily reports — in one place, for one vehicle or a whole fleet.

Live tracking
Every vehicle on one map, updated live, with speed, heading and how long it has been parked.

History & replay
Replay any day's route like a video, at up to 3600× speed, with every stop marked.

Trip reports
Distance, running time, halts, parked time and top speed per vehicle — today, yesterday, 7 or 30 days.

Driving score
A 0–100 score per vehicle from overspeeding, sudden braking, night driving and idling.

Geofences
Draw areas such as a depot or customer site and get alerted when a vehicle enters or leaves.

Loud alerts
Ignition on/off, started/stopped and geofence alerts with a loud alarm, on the phone and the web.

Order in the app
Buy a tracker in the app, pay cash on delivery, and it is added to your account when shipped.

Share live location
Send a link; anyone can watch the vehicle approach without an account.

Apps & 7 languages
Web, Android and iPhone. English, Hindi, Kannada, Marathi, Tamil, Malayalam and Urdu.

Contents

The menu, item by item

1 · Getting started

2 · Dashboard

3 · Live map

4 · Vehicles & the vehicle page

5 · History & route replay

6 · Reports: fleet report

7 · Reports: driving behaviour

8 · Reports & drawing geofences

9 · Alerts & notifications

10 · Sharing live location

11 · Phone apps & languages

12 · Ordering a tracker

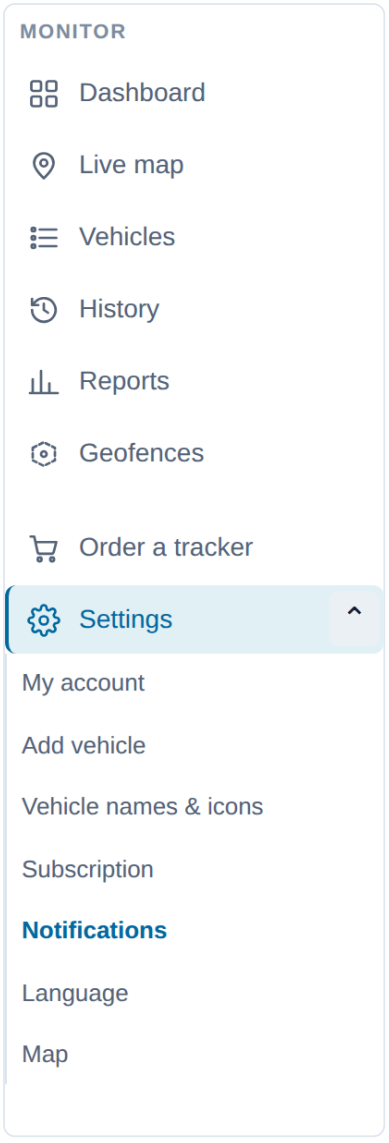

13 · Questions & glossary

Screenshots in this guide use demo vehicles and dummy data around Bengaluru, drawn on an illustrative map. In the app you get real street, satellite and terrain maps.

THE MENU

The menu, item by item

Every screen is one tap away in the side menu (on a phone, tap ☰ at the top left). Here is what each item is for.

The menu, with Settings opened.

MENU	WHAT YOU DO THERE
MONITOR	
Dashboard	Fleet summary, every vehicle on a map and the last 24 hours' totals. *Section 2*
Live map	Watch vehicles move live; follow one; show geofences. *Section 3*
Vehicles	All vehicles with status; open one for its route, replay and subscription. *Section 4*
History	Pick a day and replay where a vehicle went. *Section 5*
Reports	Fleet report, driving behaviour score and geofence report. *Sections 6–8*
Geofences	Draw areas and see every entry and exit by day. *Section 8*
ACCOUNT	
Order a tracker	Buy a tracker, cash on delivery, and follow the order. *Section 12*
Settings	Your account and preferences — see below.

THE MENU

Settings

Open **Settings** in the menu; its sections are listed right under it.

SETTINGS ITEM	WHAT IT DOES
My account	Your name, email, mobile number and password.
Add vehicle	Add another tracker to your account by its IMEI.
Vehicle names & icons	Name each vehicle (e.g. its registration number) and choose its map icon: car, bike, auto, van, truck or bus.
Subscription	Each vehicle's subscription status and expiry date.
Notifications	Phone notifications, which alerts you want, the loud alert sound and a test button. *Section 9*
Language	English, Hindi, Kannada, Marathi, Tamil, Malayalam or Urdu.
Map	Choose the map style used across the app.

At the bottom of the menu: your name, the bell (recent alerts) and Sign out.

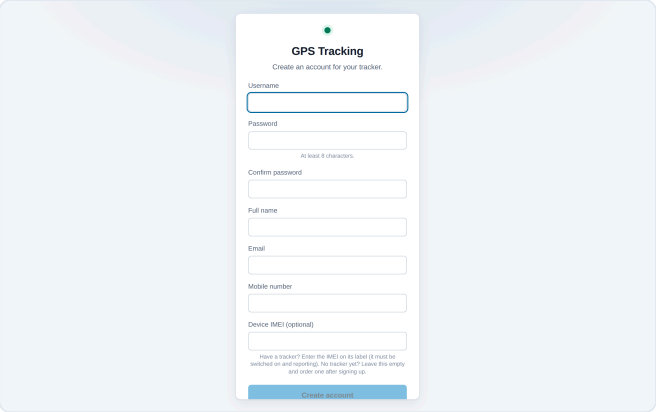

1 · GETTING STARTED

Create your account

Open the app (website, Android or iPhone) and sign up. It takes a minute.

1. **Tap “Sign up”** on the sign-in page.
2. **Choose a username and password**, and add your name, email and mobile number.
3. **Already have a tracker?** Type the IMEI printed on its label. The tracker must be switched on and reporting. Your vehicle appears straight away.
4. **No tracker yet?** Leave the IMEI empty. You will land on *Order a tracker* to buy one (see section 12).

> **Adding more vehicles later:** go to *Settings* → *Add vehicle* and type the next tracker's IMEI.

Sign up — the tracker IMEI is optional.

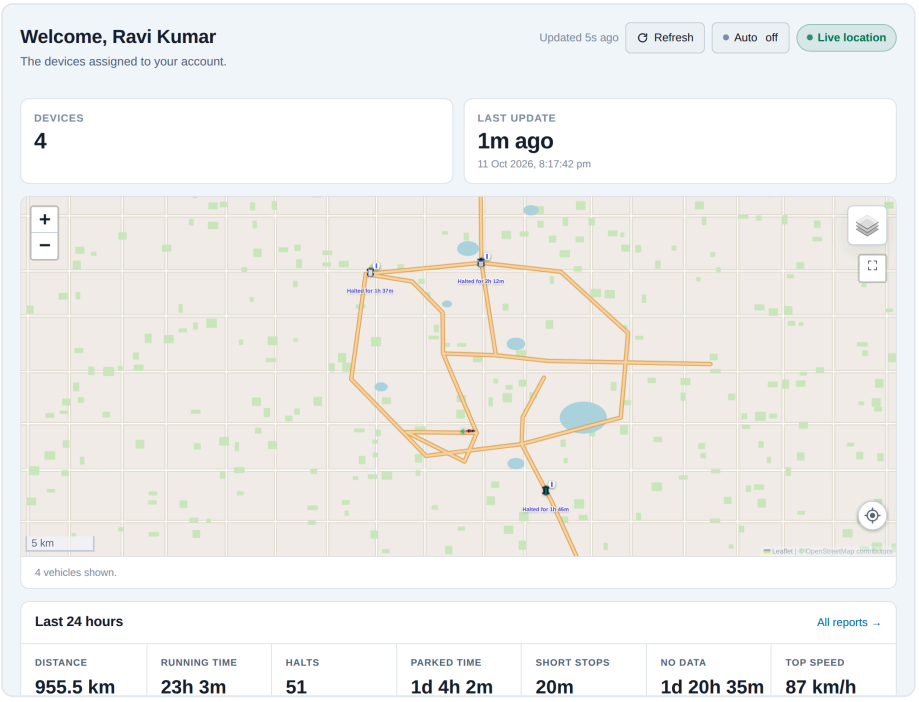

Signing in

Use your username and password. You stay signed in on that device until you sign out. If your account is switched off by your provider, access stops immediately.

2 · DASHBOARD

Your fleet at a glance

The first screen after signing in: how many vehicles you have, when they last reported, every vehicle on a map, and today's totals.

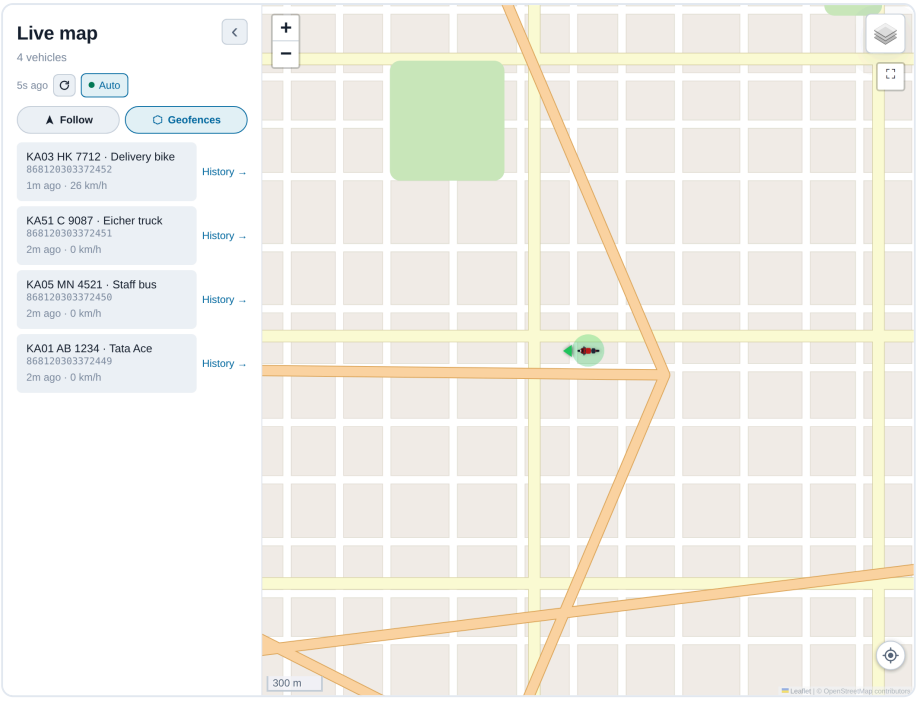

Dashboard — summary tiles, the fleet map and the last 24 hours.

ITEM	WHAT IT TELLS YOU
Devices	Vehicles on your account.
Last update	When the most recent position arrived from any of your vehicles.
Map	Each vehicle with its own icon (car, bike, auto, van, truck, bus). Parked vehicles show “Halted for 30m”.
Last 24 hours	Fleet totals: distance, running time, halts, parked time and top speed. Tap *All reports* for detail.
Refresh / Auto	Refresh fetches the latest positions now; Auto keeps refreshing on its own.

3 · LIVE MAP

Watch vehicles move live

A full-screen map that updates on its own. The list on the left shows every vehicle with its status, speed and when it last reported.

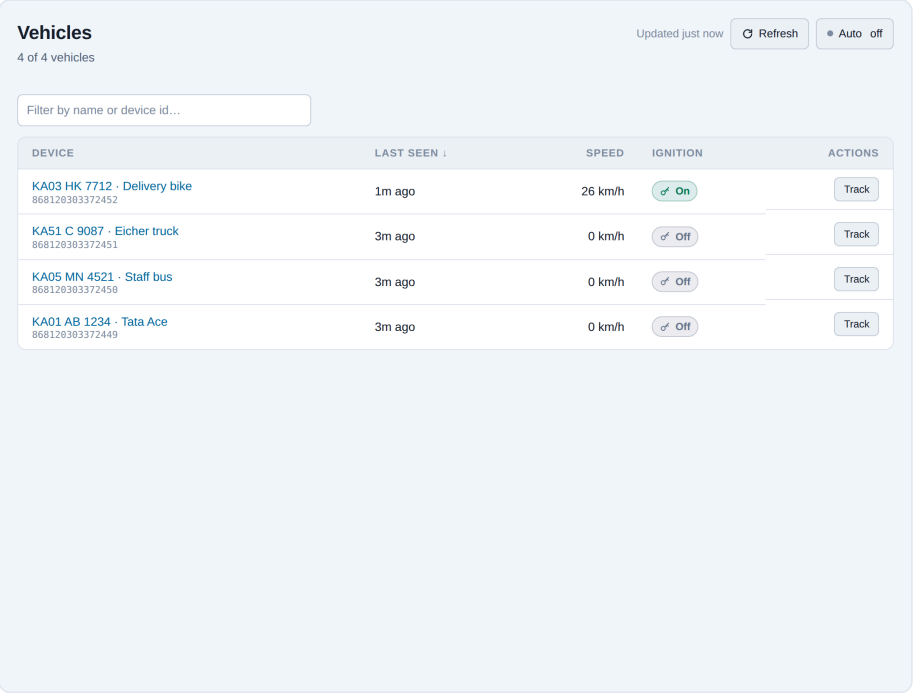

Live map — tap a vehicle to centre on it; “Follow” keeps it in view as it moves.

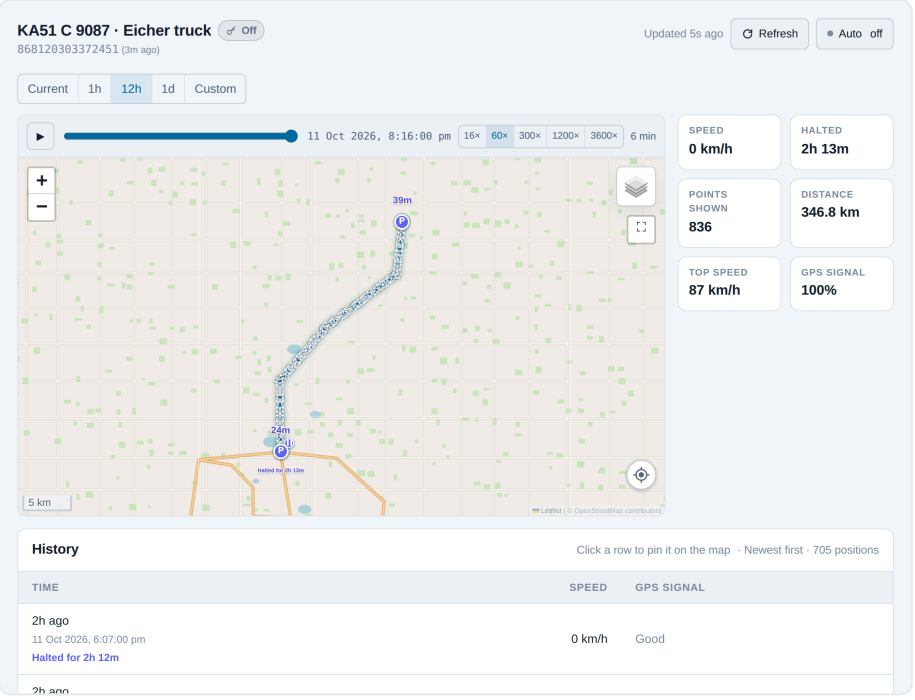

- **Online / Recently seen / Offline** — whether the tracker is reporting right now.
- **Follow** — the map keeps the selected vehicle centred and turns with its heading.
- **Geofences** — show your geofence areas on the map.
- **Layers** (top right) — switch between street map, satellite and terrain.
- **History →** — jump to that vehicle's route for today.

Vehicles and the vehicle page

The Vehicles list shows every vehicle with its status, last report and current speed. Tap one to open its own page.

Vehicles — search by name or IMEI.

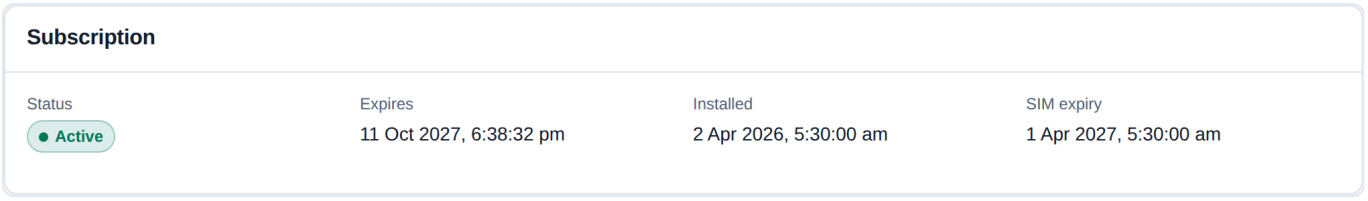

Vehicle page — pick a range (1h, 12h, 1d, 7d or custom) to see the route, then press ▶ to replay it.

4 · VEHICLES

On the vehicle page

PART	WHAT IT DOES
Range buttons	*Current* shows where it is now; *1h · 12h · 1d · 7d · Custom* draw the route for that period.
Replay bar	▶ plays the route as an animation at 16×, 60×, 300×, 1200× or 3600× speed. Drag the slider to any moment.
P markers	Places where the vehicle parked, with how long (e.g. “39m”).
Reading tiles	Speed, how long halted, heading, satellites, GPS signal, distance and top speed for the chosen range.
History table	Every position with time, speed and signal. Tap a row to pin it on the map.
Ignition badge	Next to the name: whether the ignition is on or off right now.
Subscription	Status, expiry date, installation date and SIM expiry, plus the share-location link.

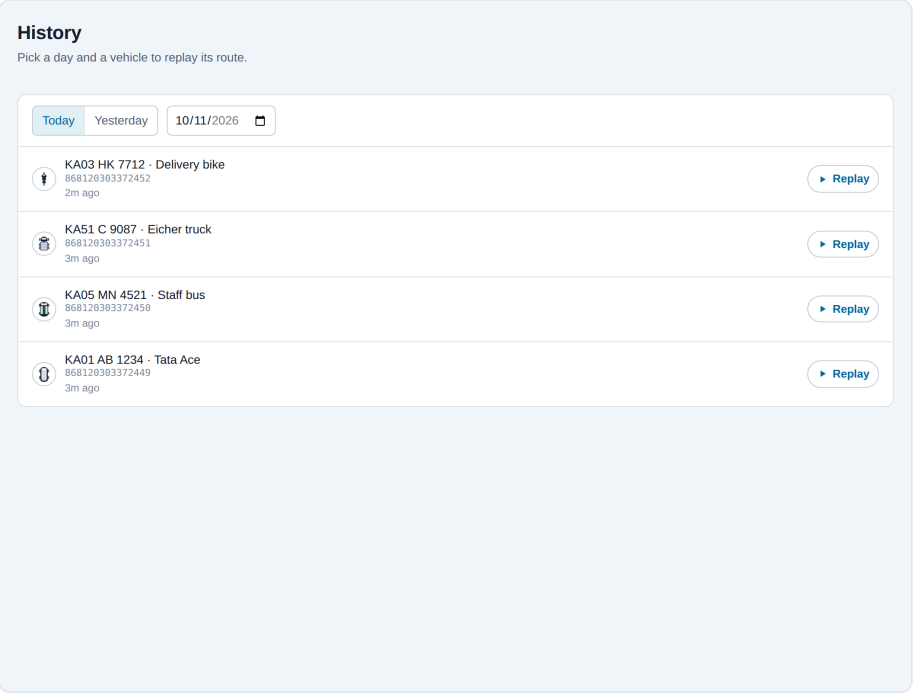

Subscription — when it expires and when the SIM needs renewing.

Name your vehicles: *Settings → Vehicle names & icons* lets you give each vehicle a name (e.g. its registration number) and pick its map icon.

5 · HISTORY

History & route replay

Pick a day, then a vehicle, and replay where it went — useful for checking a delivery round, a customer complaint or an unexpected trip.

History — Today, Yesterday, or any date up to 90 days back.

1. Choose **Today**, **Yesterday** or a date.
2. Tap **Replay** next to the vehicle.
3. Press ▶. The vehicle drives its route on the map; parked places are marked with how long it stood there.

> **Good to know:** routes leave out bad GPS readings (no satellite lock, or a jump that is impossible at the reported speed), so the line follows the real road instead of zig-zagging.

Fleet report

How far each vehicle went, how long it drove, and where the time went — for Today, Yesterday, 7 days, 30 days or any date.

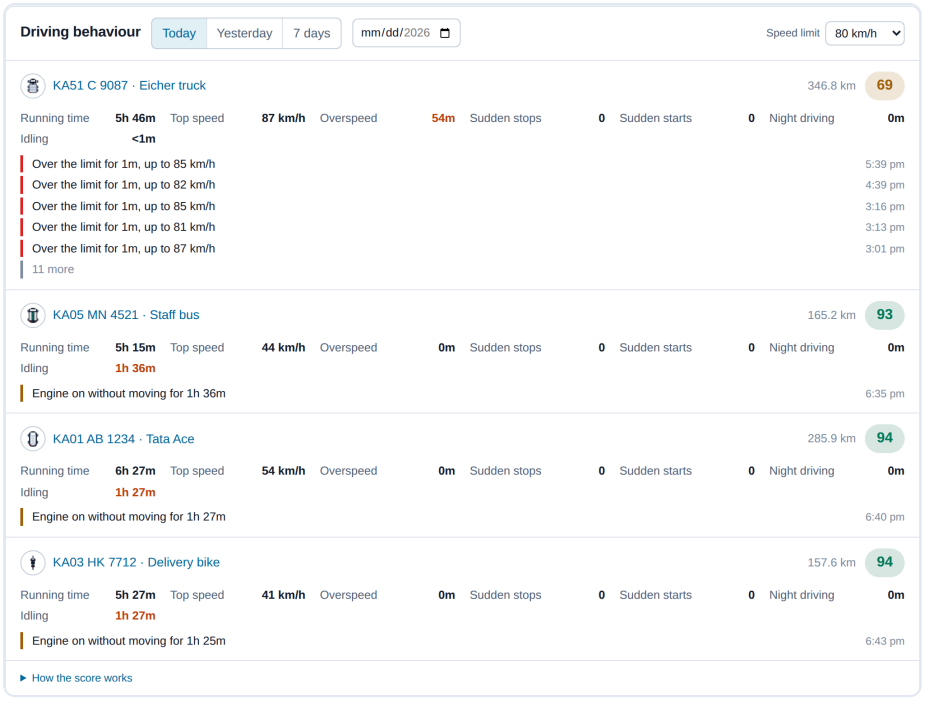

Fleet report — totals at the top, one row per vehicle below.

FIGURE	MEANING
Distance	Kilometres driven, measured along the cleaned route.
Running time	Time spent moving.
Halts	Number of stops of **10 minutes or more**.
Halted time	Total time in those halts, including parked time when the tracker goes quiet to save power.
Longest halt	The single longest stop.
Short stops	Time in stops **under 10 minutes** — traffic signals, quick drops.
No data	Time the tracker was silent or offline (no power, no network). Running + halted + short stops + no data = the whole period.
Top speed	Fastest reliable reading.

Every minute of the period is accounted for, so the figures always add up to the full day (or week).

Driving behaviour

A score from 0 to 100 for each vehicle, so you can see at a glance who drives safely and who needs a word.

Driving behaviour — the truck lost points for 54 minutes above the 80 km/h limit; each overspeed is listed with its time.

How the score works

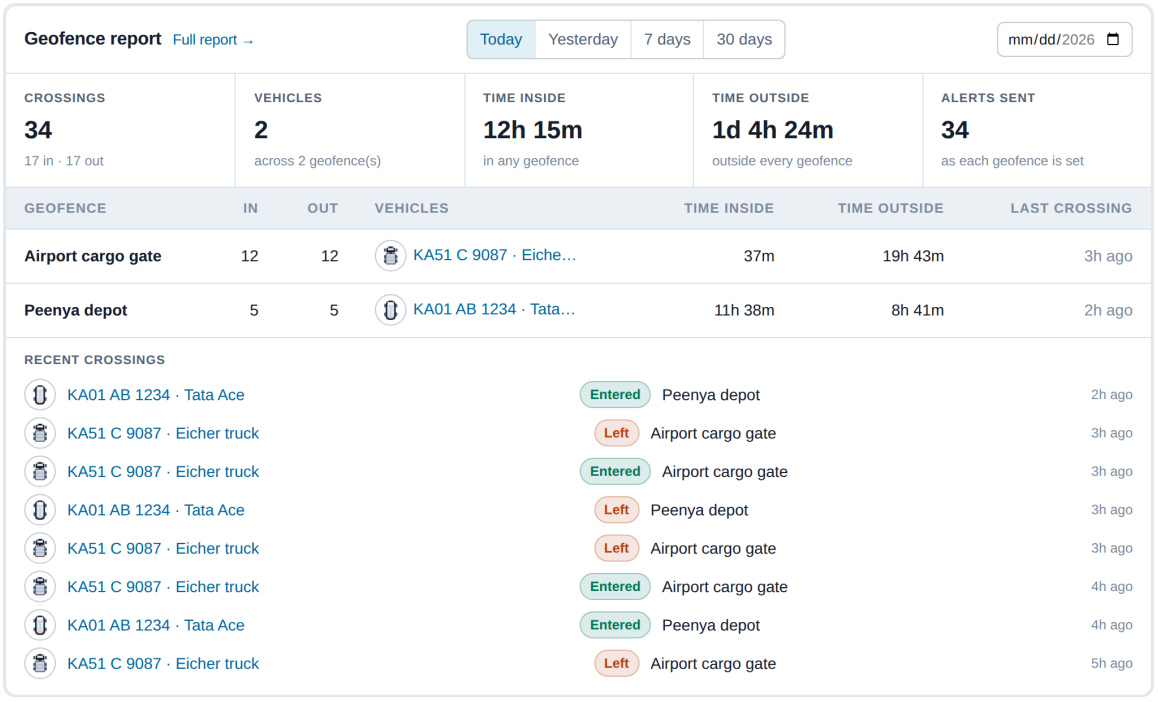

Every vehicle starts at **100** and loses points for:

ITEM	COUNTED AS	MAX. POINTS LOST
Overspeed	Time driven above the speed limit you choose: 60, 80, 100 or 120 km/h.	40
Sudden stops & starts	Speed changing by 40 km/h or more within 15 seconds, per 100 km.	30
Night driving	Time driven between 11 pm and 5 am.	15
Idling	Engine on while the vehicle is not moving.	15

A vehicle needs at least 5 minutes of driving in the period to be scored. Pick the speed limit at the top right of the card.

Geofence report

How often vehicles entered and left each geofence, and how long they spent inside — handy for depot turnaround times and site visits.

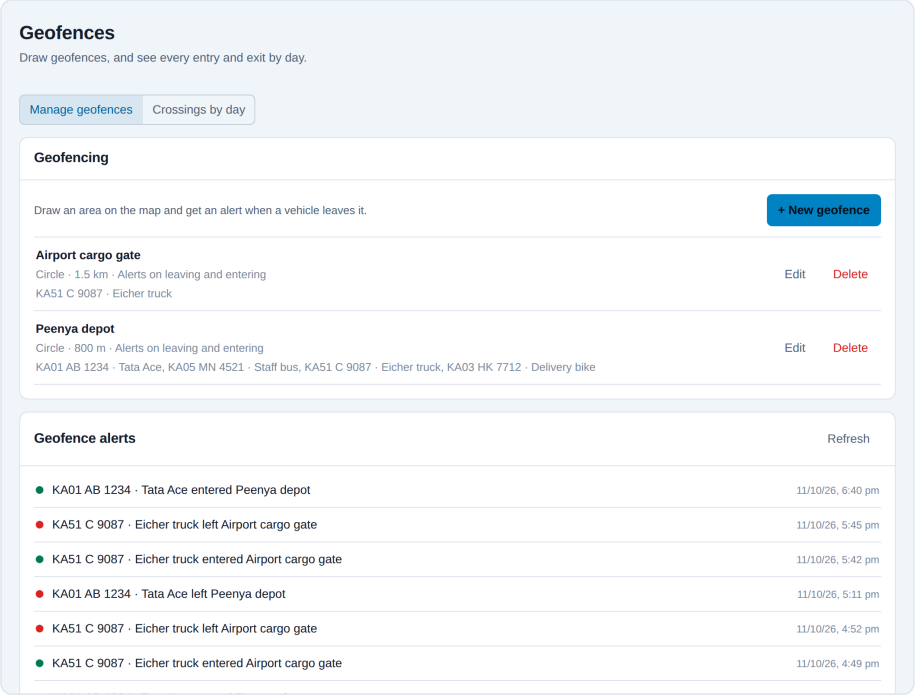

Geofence report — crossings, time inside and outside, and the latest entries and exits.

FIGURE	MEANING
Crossings	Entries plus exits in the period.
Time inside	Time vehicles spent inside any geofence.
Time outside	The rest of the period — inside + outside = the whole period for each vehicle.
Alerts sent	Alerts raised, following each geofence's own settings.

Tap **Full report** → for a day-by-day timeline on the Geofences page.

Drawing geofences

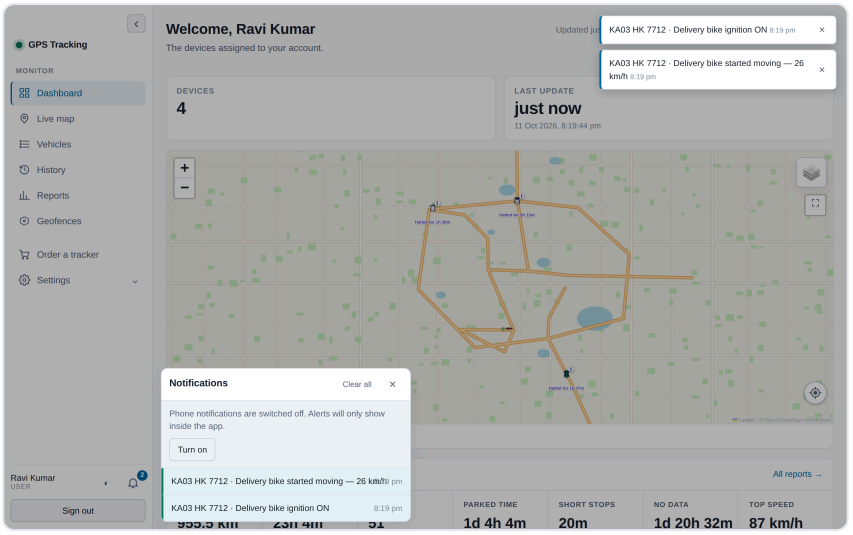

Geofences — your areas, and every entry and exit as it happened.

1. Open **Geofences** and tap **+ New geofence**.
2. Draw a **circle** (radius from 50 m to 50 km) or a **polygon** around the area on the map, and give it a name.
3. Choose the vehicles to watch, and whether to alert on **leaving**, **entering**, or both.
4. Save. Every crossing is recorded and, if you asked for it, alerted.

9 · ALERTS

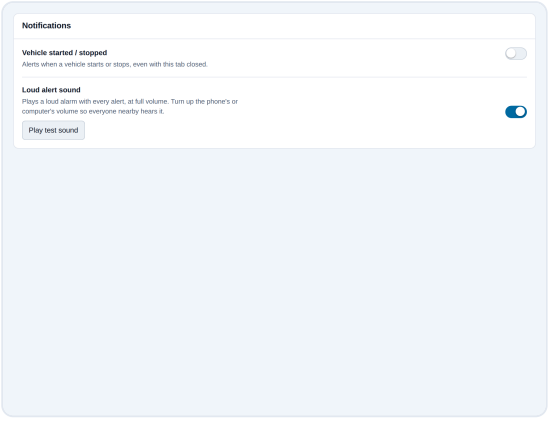

Alerts & notifications

The app tells you the moment something happens: ignition on or off, a vehicle starting or stopping, or a geofence being crossed.

An alert pops up at the top right, sounds a loud alarm, and is kept in the Notifications panel (the bell).

- **Loud alarm** — a sharp two-tone alarm at full volume, so everyone nearby hears it. Switch it off or play a test in *Settings → Notifications*.
- **Phone notifications** — turn on in *Settings → Notifications*. On Android and iPhone the notification plays the same loud alarm and pops up over other apps.
- **Choose which alerts** — ignition, start/stop and geofence alerts can each be switched on or off in the app.
- **Notifications panel** — the bell keeps a list of recent alerts; tap one to open that vehicle.

Settings → Notifications.

> **Tip:** keep the phone's notification volume up and Do Not Disturb off. Phone alerts arrive while the app is open or recently used.

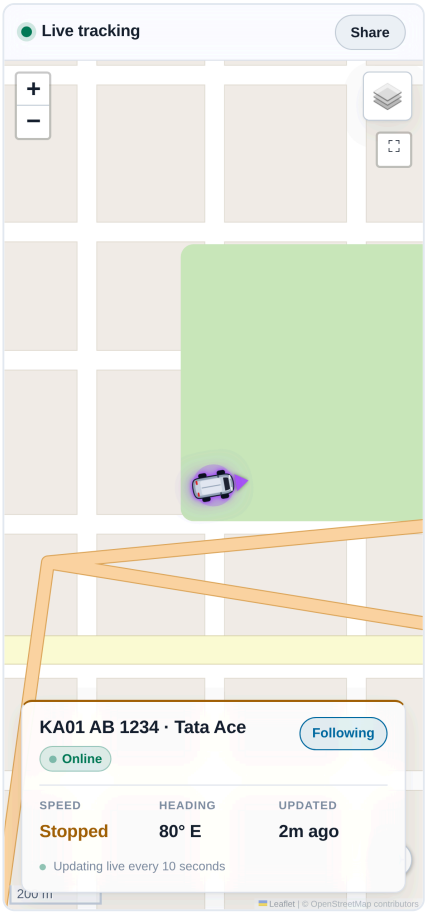

10 · SHARING

Share a vehicle's live location

Send a link to a customer, family member or school parent. They can watch the vehicle live — no account, no app.

1. Open the vehicle page and scroll to **Subscription → Anonymous tracking link**. Your provider sets up a code for each vehicle, such as `ACE-1234`.
2. Copy the link *…/track/ACE-1234* and send it on WhatsApp, SMS or email.
3. It shows the vehicle, its speed, heading and when it last reported, updating every 10 seconds.
4. Want a different code, or to stop sharing? Ask your provider to change it — the old link stops working at once.

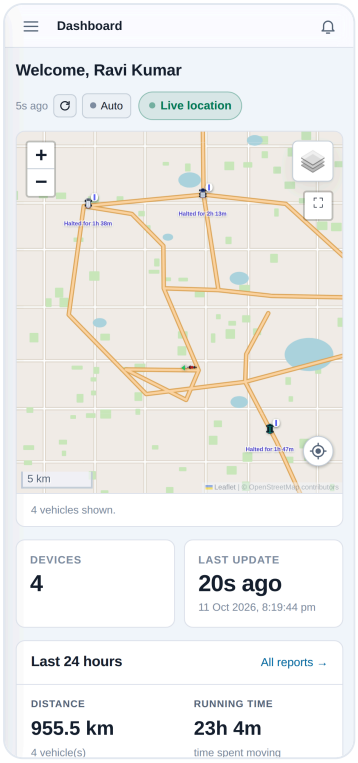

> **Anyone** with the link can see where the vehicle is, but nothing else: no history, no other vehicles, no account details.

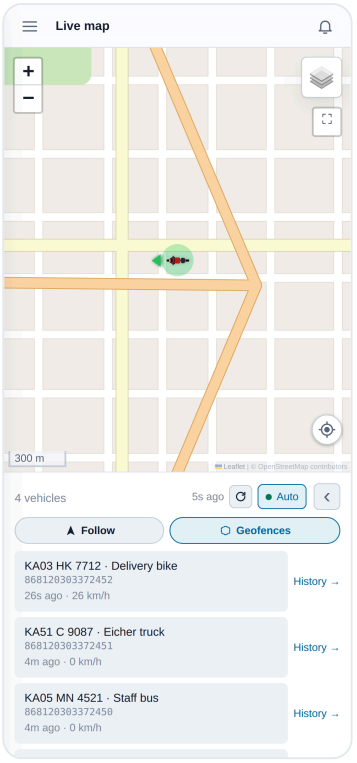

What the person you share with sees.

On your phone, in your language

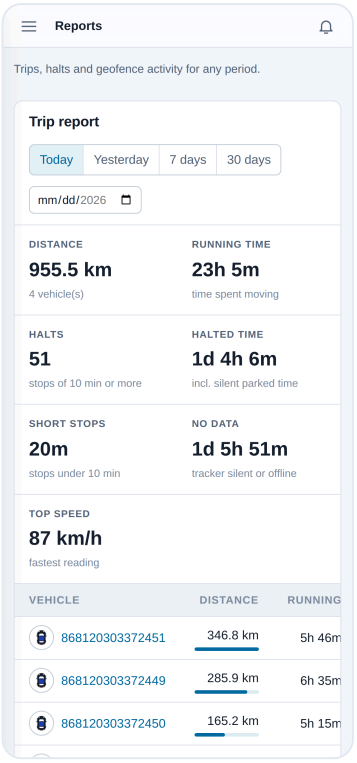

The same features on the website, the Android app and the iPhone app. Pages open instantly and fill in as data arrives.

Dashboard

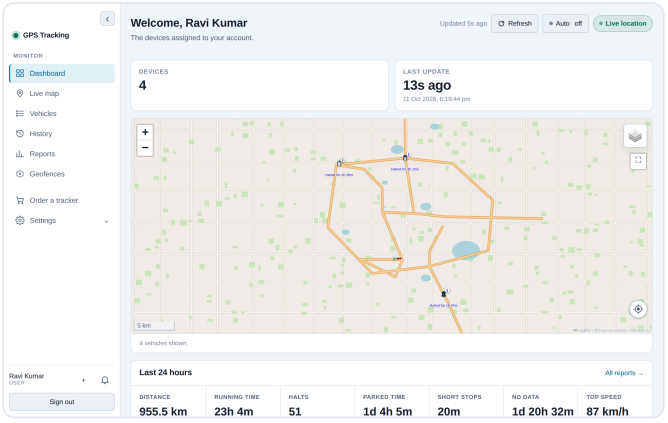

Live map

Reports

Seven languages

English, हिन्दी (Hindi), ಕನ್ನಡ (Kannada), मराठी (Marathi), தமிழ் (Tamil), മലയാളം (Malayalam) and اردو (Urdu). Change it in *Settings → Language*; menus, alerts and reports switch at once.

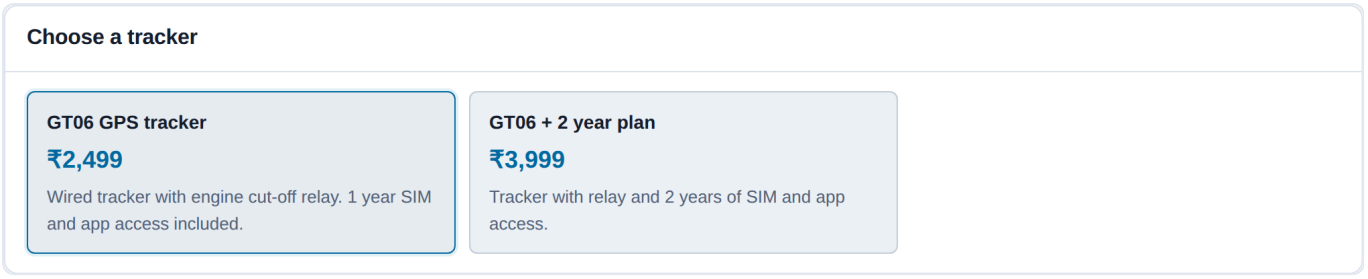

The dashboard in Hindi.

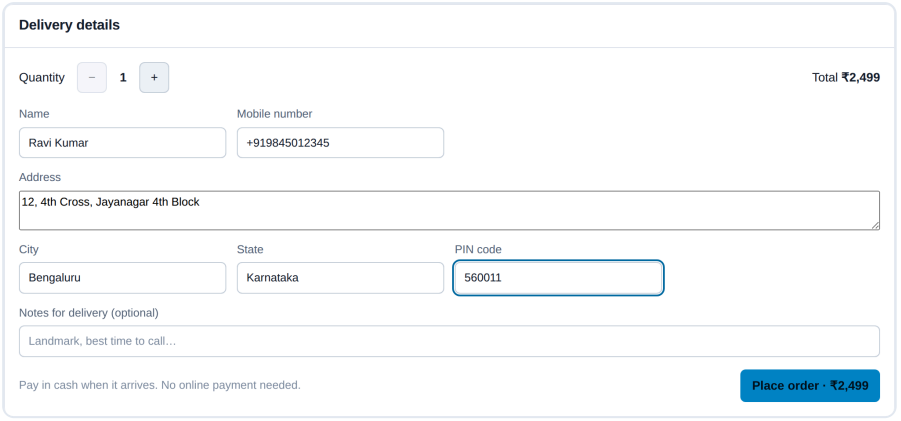

12 · ORDERING

Order a tracker in the app

No tracker yet? Order one from *Order a tracker* in the menu. It is delivered to your door and you pay cash on delivery.

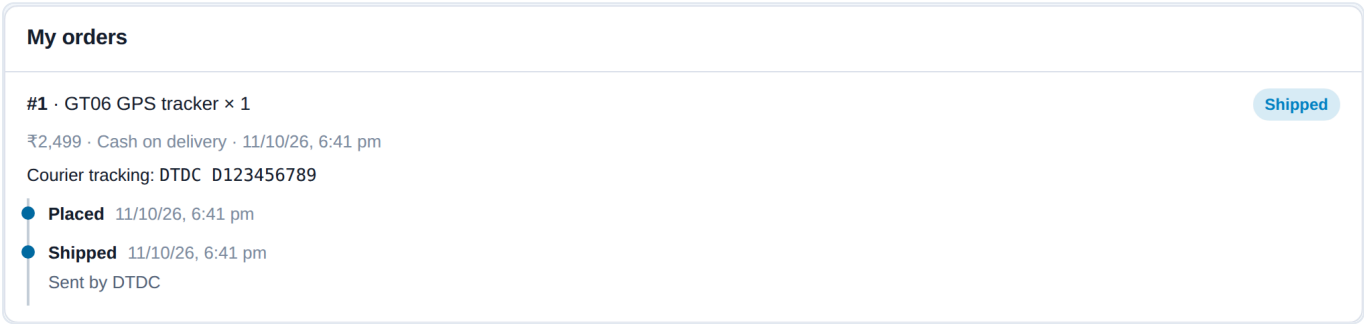

1 · Pick a tracker.

2 · Quantity and delivery address.

1. Choose a **tracker** and the **quantity**. The total updates as you go.
2. Enter your **name, mobile number and address** with the 6-digit PIN code.
3. Tap **Place order**. You will be called to confirm.
4. Follow it under **My orders**: Placed → Confirmed → Shipped → Delivered, with the courier tracking number. You can cancel while it is still *Placed*.
5. When it ships, the tracker is **added to your account automatically** — no IMEI to type.

My orders — progress, courier tracking and the trackers added to your account. You can cancel while an order is still “Placed”.

Questions & glossary

My vehicle shows “Offline”.

The tracker has not reported recently. Check that it has power (vehicle battery connected) and mobile signal. Underground parking blocks GPS and network.

Why is there “No data” time in my report?

The tracker was silent — switched off, out of network, or the vehicle battery was disconnected. That time is shown separately instead of being guessed.

The route cuts across a corner.

The tracker reported less often there, for example in poor network. Ask your provider to shorten the reporting interval if it happens often.

I'm not getting phone alerts.

Turn on *Settings* → *Notifications*, allow notifications when the phone asks, keep the volume up and Do Not Disturb off. Use *Play test sound* to check.

My subscription expired.

Position data is hidden until it is renewed; the vehicle stays in your list. Contact your provider to renew — history is kept.

Glossary

TERM	MEANING
IMEI	The 15-digit number printed on the tracker's label; identifies your tracker.
Halt	A stop of 10 minutes or more.
Short stop	A stop under 10 minutes.
Running time	Time the vehicle was moving.
Geofence	An area you draw on the map, such as a depot or customer site.
GPS signal	How good the satellite fix was; poor fixes are left out of routes and reports.
